RentHub — Viral Runbook V2 — Full Anchor Implementation (All Rents >=N400k)

Updated 28 Oct 2026 with Anchor BaaS fees: Virtual NUBAN free, inflow 0.5% capped N200 + N50 EMTL = N250, NIP outflow N20 flat, Book N0 | Old: Paystack N2k + AfriEx 2% = N10k-N142k per txn

Tier	Landlords	Txns/wk	Old Cost/wk (Paystack+2%)	Anchor Cost/wk	Save/wk	Save/mo
T1 500	1,100 props	200	200 x N52k = N10.4M	200 x N270=N54k	N10.35M	N41.4M
T2 1k	2,200 props	400	N20.8M	N108k	N20.69M	N82.8M
T3 2k	4,400 props	800	N41.6M	N216k	N41.38M	N165.6M
T4 5k	11k props	2,000	N104M	N540k	N103.46M	N414M
T5 10k	22k props	4,000	N208M	N1.08M	N206.92M	N828M

What changes with Full Anchor at each tier:

T1 500 landlords (Now): Enable Anchor sandbox. Create virtual NUBAN per transaction (N0). Collection via NUBAN: N200 capped + N50 EMTL = N250 (vs N2k Paystack). Payout N20 flat (vs AfriEx N8k on N400k). Caution rollover BOOK N0. Need 6 verifiers, 20 Neon connections, Upstash Redis rate limit 300req/15min, PAYOUT_MODE=ANCHOR_AUTO. Saves N41.4M/mo funds Field Ops hub Jabi. **Action:** ANCHOR_API_KEY, WEBHOOK_SECRET, REVENUE_LEDGER_ID.

T2 1k: Force >N3M rents to Anchor NIP rail (solves Maitama N7M cap). 4x Render, Cloudflare cache 60s, BullMQ queue for Anchor transfers (idempotencyKey=transactionId). Saves N82.8M/mo. **T3 2k:** Full Anchor for all new txns, keep Paystack card optional. 6x Performance, Neon 4CU + 80 pool, S3 images, reconciliation cron every 6h: SUM(escrowHeld) vs Anchor getBalance(pool) 1:1. Saves N165.6M/mo. **T4 5k:** Move to k8s 15 instances, Neon 8CU 150 pool, trustee via Anchor bank partnership (skip 3-6mo negotiation), BVN check >N5M, KPMG audit ready due to sub-ledger. Saves N414M/mo. **T5 10k:** AWS Lagos, Neon 16CU 2 replicas, Redis Enterprise, circuit breaker on Anchor, monthly saving N828M = 2x your entire seed raise per month.

Updated ENV for Full Anchor
